416.305.1757

Skills

Languages: TypeScript, JavaScript, Python, C#, Java, Go, SQL, MATLAB, HTML5, Sass

Front End: React, Redux, Vue, Electron, JEST, Enzyme, Webpack, Babel, Bulma, Lottie, Figma, Gatsby, Apollo GraphQL

Back End + Infrastucture: Express, .NET Core, AWS S3, Firebase, Docker, Azure DevOps (Pipelines), CircleCI, AWS EC2

Data: PostgreSQL, MongoDB, TensorFlow, YOLO, Microsoft Cognitive Services (LUIS), Elasticsearch

Experience

CRYPTONUMERICS / Full Stack Developer Intern
JAN 2020 – PRESENT

- Building and shipping new features for CN-Protect, a cross-platform Electron app for dataset privacy protection
- Owner of internal report generator service (Java, Pentaho) to be consumed in CN-Protect and future applications
- Decreased Windows build time of CN-Protect by automating EV code signing process with Bash script
- Creating user stories (Figma), building out UI/UX for upcoming web-based enterprise application (React)
- Practicing test driven development in order to prevent avoidable regressions

UNIVERSITY OF WATERLOO / ML Research Assistant
SEPT 2019 – DEC 2019

- Trained real-time, object detection model of kitchen items using Darknet's YOLO for pasta-cooking robot.
- Increased model's pan detection accuracy by 28% by introducing more training data and improved labeling

GRAIN DISCOVERY / Software Software Engineering Intern
MAY 2019 – AUG 2019

- Utilized React, Redux, DeckGL and Express to build Grain Discovery's commodity trading platform
- Created diverse user stories for UI/UX to cater to wide range of demographics in agricultural business industry
- Designed concise, well-tested functional components with emphasis on reusability and maintainability
- Incorporated shell scripts, and re-configured builds in order to decrease front end build time by 23%
- Practiced agile and scrum methodologies in a fast-paced pre-launch startup environment

ENGINEERING.COM / Software Software Engineering Intern
SEPT 2018 – DEC 2018

- Worked extensively in Vue, Vuex, Fabric.js, Go and MySQL on ProjectBoard, a project collaboration platform
- Improved internal analytics page with useful data visualizations to coincide with business requirements
- Wireframed, implemented and user tested new home and user profile pages (Figma, A/B Testing, Hotjar)
- Performed automated end-to-end and unit testing using JEST, improving test coverage from 13% to 78%
- Maintained documentation of services and libraries to decrease onboarding time of new team members

Projects

ProjectCourtsider
ONGOING

- Marketing tool used to gauge success of influencer campaigns on popular social media platforms (i.e., Instagram)
- Pulls raw data from platforms (APIs/scraping), derives conversion metrics, makes predictions on future campaigns
- Technologies: React (TypeScript), .NET Core MVC (C#), PostgreSQL, MongoDB

Education

UNIVERSITY OF WATERLOO / Mechanical Engineering (BaSc)
SEPT 2017 – JUN 2022

- Cumulative GPA: 83%

COURSERA / Machine Learning (Stanford) - Andrew Ng
JAN 2020 – PRESENT

- Linear/Logistic Regression, Neural Networks, SVMs, Anomoly Detection, System Design
